DETAILED ACTION

Claim Rejections - 35 USC § 112

Claims 4-8 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. It is not clear how the push out mechanism renders the massage unit tiltable about a fulcrum on the lower roller. The fulcrum appears to be new matter because the original disclosure provides no support for a fulcrum on the lower roller.

Claims 4-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 4-8 it is not clear as to what the fulcrum on the lower rollers is in reference to.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 4-5 and 7 as understood are rejected under 35 U.S.C. 102(b) as being anticipated by Spears.

Spears discloses in figures 1-12 a massage machine comprising a backrest (fig. 1) having disposed therein a pair of guide rails (68, 70), a massage unit (col. 5, lines 22-25), having a pair of therapeutic fingers (126, 142), provided at upper and lower portions thereof, upper rollers 106, lower rollers 106, reciprocatingly moveable upward and downward along the backrest, a pushing mechanism 124 including a crank mechanism 120 having one end connected to the massage unit (fig. 7) and the other end connected to the rollers (fig. 7) and the push out mechanism rendering the massage unit tiltable about a fulcrum 240. The crank mechanism includes crank pins 114 rotatably carrying the rollers and a crankshaft 128. The device further includes sensors (256, 258) for detecting movement.

Response to Arguments

Applicant's arguments with respect to claims 4-5 and 7 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
